Work Experience

Amadeus Labs – Software Engineer Jan 2026 – Present

- Worked in the Amadeus Nevio team (next-gen product) on the Air France cutover project, covering development, pre-production, and post-production from creation to customer delivery.
- Contributed to product development in multiple capacities, including Java development, DevOps, and testing.
- Collaborated with the team to implement Java mapping, integrate JMH and Gatling into GitHub Actions, set up Dev/UAT/PPT/PDT phases, and implement alerting for microservices.
- Automated team tasks using agents and workflows, reducing manual effort and accelerating delivery.

Amadeus Labs – GET Intern Feb 2025 – Dec 2025

- Contributed to an AI-assisted support feature for Amadeus Altéa Reservation Desktop Web, helping airline agents troubleshoot errors using information retrieved from Amadeus' internal knowledge base.
- Integrated an AI-powered assistance workflow with an existing Java-based legacy application, enabling agents to receive contextual guidance without relying on time-consuming manual knowledge lookup.
- Implemented the deployment phase by integrating agentic code into the legacy codebase and supporting deployment within the existing enterprise environment.

Projects

Multi-Agent-Ecosystem | *Streamlit, LangChain, PyPDF, Hugging Face, FAISS, Replicate, sentence-transformers* GitHub

- Built an interactive RAG-powered chatbot using Streamlit and Hugging Face Transformers, optimizing for document retrieval and question answering.
- Processed 100+ documents across PDF and DOCX formats using PyPDF and docx2txt for efficient multi-format document handling.
- Utilized FAISS with Hugging Face embeddings to enable fast, scalable semantic search over large collections of study materials.
- Designed a streamlined UI allowing real-time, context-aware responses to user queries, improving study efficiency and note-taking.

NEED IDEA FOR 2nd PROJCET | *Groq, Google Generative AI, Whisper, OpenCV, pyttsx3, pyperclip, PIL* GitHub

- Developed a sophisticated multi-modal AI assistant that integrates Groq and Google Generative AI, delivering advanced text and image-based responses to user inputs.
- Implemented comprehensive image processing functionalities, including screenshot capture and webcam image analysis, to provide detailed context and enhance the assistant's response accuracy.
- Facilitated clipboard text extraction and seamlessly integrated it into the assistant's responses, enriching user interactions with additional relevant information.
- Designed a versatile user interface that supports both text input and manual command selection, allowing for a flexible and interactive experience with the assistant.

Achievements and Open Source Contributions

Contributed to PyTorch's open-source codebase by [describe your specific contribution, e.g., fixing a bug in the autograd module / improving documentation for X / adding support for Y].

Won first prize at the Airtribe X Render Buildathon for [briefly mention what you built, e.g., building a real-time X application using Y].

Education

Nitte Meenakshi Institute of Technology June 2025
B.Tech. Artificial Intelligence and Data Science *CGPA: 8.22/10*

Delhi Public School, Noida May 2021
Class 12th - Central Board of Secondary Education *Percentage: 87%*

St. Mary's Senior Secondary School, Banda May 2019
Class 10th - Central Board of Secondary Education *Percentage: 85%*

Skills

Libraries:	NumPy, Pandas, Scikit-learn, PyTorch, OpenCV, Matplotlib
Frameworks:	LangChain, Hugging Face, Streamlit
Machine Learning:	Supervised Learning (Regression and Classification), Unsupervised Learning
Deep Learning:	ANN, CNN, RNNs, LSTM, Autoencoders, GAN, VAE
Core Subjects:	Database Management Systems (DBMS), Python, Object-Oriented Programming (OOP)
